REACH AND CLP COMPLIANCE

The European Regulation on the Registration, Evaluation and Authorisation of Chemicals REACH – EC No. 1907/2006 aims to ensure a high level of protection for the environment and human health through the registration of all chemical substances produced in, or imported into Europe in quantities of 1 tonne or more per year.

The European Regulation on Classification, Labelling and Packaging of substances CLP – EC No. 1272/2008 aims to facilitate worldwide trade by harmonizing criteria for classification and labeling according to the “Globally Harmonized System of Classification and Labelling” of the United Nations.

Tribotecc GmbH is compliant with REACH and CLP and can therefore ensure that its raw material supplies and manufactured products meet the regulatory requirements.

Registration of substances

All our substances manufactured or imported in quantities of 1 tonne or more per year have been successfully registered. This also includes substances under development, as soon as they exceed the 1 t/a threshold.

Evaluation of substances

The registration dossiers are continuously being revised and, if legally required, updated according to REACH Art. 22. We stay in contact with the European Chemical Agency (ECHA) responding to new data requirements that may arise during the evaluation of the registration dossiers.

Authorisation and Restriction

We are aware of the authorization and restriction procedures that can be initiated by ECHA or the Member States. In case any of our substances becomes selected we will comply with the legal obligations. This includes providing enough information about authorization / restriction terms in the substance safety data sheet.

Safety Data Sheets (SDS)

A SDS will be provided by the delivery of goods. All our SDS meet the requirements of Article 31 and Annex II (and its amendments) of the REACH Regulation. If applicable, the registration number and the classification according to the CLP Regulation are included.

Information for Poison Centers

Under the CLP Regulation (article 45 and annex VIII), we provide information to ECHA about hazardous mixtures placed on the market. Thereby, poison centers in the EU can support citizens and healthcare professionals on emergencies arising from exposure to hazardous chemicals.

Brexit

The United Kingdom (UK) has officially left the European Union (EU). Companies based in the EU will be affected by Brexit if their supply chains extend to the UK: registrations can only remain active for REACH (after the transition period ends on December 31, 2020) through an only representative or an office in the EU.

We would like to inform you that we have carefully assessed the situation. We can therefore guarantee that only substances with a valid REACH registration will be delivered to our customers.

SCIP Databank

SCIP („Substances of Concern In articles as such or in complex objects (Products“) is the database for information on Substances of very high Concern (SVHC) in articles. Companies supplying articles containing SVHC in a concentration above 0.1% weight by weight (w/w) on the EU market must submit information on these articles to ECHA, as from 5 January 2021. Tribotecc GmbH does not manufacture any articles. We have confirmation from our suppliers of packages (articles) that these also fulfil these requirements and do not contain any components above 0.1 percent by weight of a "substance of very high concern" (SVHC).
